Introduction

CIGWELD Professional:
when welding is your business
At Thermadyne we distinguish ourselves from our competitors through superior features, dependable products, technical innovation and excellence in customer service and technical support.

Our range of high performance electrodes, rods and fluxes offers an optimum solution for every welding application.

So if you’re serious about performance, cost and ease of use the CIGWELD Professional range has the answer.

Mild Steel and Iron Powder Electrodes

**GP6012**

- Versatile General Purpose Electrode
- All positional Welding Capabilities
- Ideal for the Vertical-Down Welding of Thin Steel Sections
- Wrought iron furniture
- Suitable for welding Mild steel plate, sheet metal and galvanised iron sheet, ducting, hoppers, tanks, pipes and low pressure pipelines
- Pipes and low pressure pipelines
- Excellent for welding joints with poor fit-up

**Classifications:**

- AS/NZS 4855: (new) B 4313 A
- AS/NZS 1553.1: (old) E4112-0
- AWS/ASME-SFA A5.1: E6013

- Det Norske Veritas Grade 2
### Satincraft 13

- General Purpose, Rutile Type Electrode
- Outstanding Operator Appeal!
- Versatile – All Positional Capabilities
- Smooth Fillet Welds with Low Spatter
- BLUE flux colour for instant ID

General workshop, field and structural welding of mild or galvanised steel components such as pipes, tanks, frames, fences and gates, etc.

### Weldcraft

- Rutile, basic type electrode
- Higher radiographic quality
- Excellent mechanical properties
- Versatile ‘out of position’ capabilities
- ‘On-site’ and workshop welding where better mechanical properties are required and the work cannot be re-positioned to allow welding in the downhand. The electrode is recommended for welding joints subject to radiographic examination in pressure vessel, ship building, bridge and storage tank fabrications.

### Ferrocraft 21

- Rutile Type, Medium Iron Powder Electrode
- Excellent Operator Appeal!
- Versatile - All Positional Capabilities.
- Easy Striking - Hot or Cold!
- Ideal for Vertical Down Fillet Welding.
- Workshop or “on-site” repair, maintenance and fabrication welding jobs where the iron powder addition gives improved usability over conventional E4112 rutile type electrodes.
- Ideal vertical-down fillet welding electrode for thinner steel sections using “Touch Welding” techniques.

AC (minimum 45 OCV) DC+ or DC- polarity

# 5.0mm Ferrocraft 21 is not recommended for out of position (ie. vertical or overhead) welding applications.
Mild Steel and Iron Powder Electrodes

Ferrocraft 22

- Rutile Type High Iron Powder Electrode
- Self Releasing Slag
- Recommended for high production welding where large standing fillet welds are required
- Ideal electrode for heavy structural welding – tanks, frames, girders, beams, ship structures, rolling stock and general fabrication in the workshop or "on-site"

Classifications:
AS/NZS 4855: (new) B E4924 A
AS/NZS 1553.1: (old) E4824-0
AWS/ASME-SFA A5.1: E7024

Typical All Weld Metal Mechanical Properties:
- Yield Stress: 440 MPa
- Tensile Strength: 512 MPa
- Elongation: 25%
- CVN Impact Values: 60J at 0°C

Typical All Weld Metal Analysis:
- C: 0.05% Mn: 0.75% Si: 2.5%

Approvals:
- Lloyds Register of Shipping Grade 2
- American Bureau of Shipping Grade 2
- Det Norske Veritas Grade 2

</table>

Ferrocraft 22 is formulated to operate with AC (minimum 45 OCV) DC+ or DC- polarity.
The preferred polarity for DC fillet welding is DC+.

Pipearc 6010P

- User Friendly Pipe Welding Electrode
- Lower Spatter Levels and Easy Slag Removal
- Excellent Reverse Bead Formation on Butts
- Versatile “Out-of-Position” Capabilities
- Batch Numbered for On-the-Job Traceability
- Used to weld out (root, fill and cap) steel pipes such as API 5L, 5LX grades X42 to X52
- Welding of “V” butt (groove weld) joints in higher strength steels, including 5LX grades X60, X65 and X70. Recommended for root pass welding only.

Classifications:
AS/NZS 4855: (new) B E4310 A
AS/NZS 1553.1: (old) E4110-2
AWS/ASME-SFA A5.1: E6010

Typical All Weld Metal Mechanical Properties:
- Yield Stress: 400 MPa
- Tensile Strength: 510 MPa
- Elongation: 30%
- CVN Impact Values: 65J at -20°C

Typical All Weld Metal Analysis:
- C: 0.11% Mn: 0.46% Si: 0.15%

Approvals:
- Lloyds Register of Shipping Grade 3
- American Bureau of Shipping Grade 3
- Det Norske Veritas Grade 3

Packaging and Operating Data:

</tbody>
</table>

Pipearc 6010P is formulated to operate with DC+ (Direct Current Electrode Positive) polarity.
The preferred polarity for DC fillet welding is DC+.

Ferrocraft 11

- Cellulose Pipe Welding Electrode
- All Positional, AC / DC Capabilities
- High Penetration, Root Pass Applications
- WHITE flux colour for easy ID
- Recommended for root pass welding where the "stovepipe" or "flick" techniques can be used to achieve full root penetration
- The root, hot fill and capping pass welding of pipelines, pressure vessels, storage tanks, workshop and field construction

Classifications:
AS/NZS 4855: (new) B E4311 A
AS/NZS 1553.1: (old) E4111-2
AWS/ASME-SFA A5.1: E6011

Typical All Weld Metal Mechanical Properties:
- Yield Stress: 415 MPa
- Tensile Strength: 500 MPa
- Elongation: 28%
- CVN Impact Values: 90J at -20°C

Typical All Weld Metal Analysis:
- C: 0.12% Mn: 0.47% Si: 0.10%

Approvals:
- Lloyds Register of Shipping Grade 3, 3Y
- American Bureau of Shipping Grade 3
- Det Norske Veritas Grade 3

The results quoted in this data sheet are obtained from the listed Shipping Societies (ABS, DNV, LRS) Conformance Tests and Procedures. Actual weld metal mechanical properties achieved with PipeArc 6010P are influenced by many factors including, base metal analysis, welding parameters / heat input used, number of weld passes and run placement etc. On the job mechanical tests may produce different results. Please consult your CIGWELD Area Manager or Customer Service for welding procedure recommendations.

AC (minimum 65 OCV) DC+ or DC- polarity.
Hydrogen Controlled Electrodes

Storage & Reconditioning of CIGWELD Hydrogen Controlled Electrodes

Storage Environments:
Undamaged packs/cartons of Ferrocraft and Alloycraft electrodes stored at 50% R.H. or less and kept at 10-15°C (50-60°F) above ambient temperature with a maximum of 40°C (105°F) stored off the ground and away from walls in cupboards, containers or warehouses are expected to maintain their designated hydrogen levels indefinitely.

Moisture Re-absorption:
Cardboard packs/cartons of Ferrocraft and Alloycraft may lose their designated hydrogen status due to moisture re-absorption from poor storage environments. Where electrodes have been exposed to moisture or where hydrogen control is important, the following procedures are recommended for reconditioning.

Hermetically Sealed:
Hermetically sealed, hydrogen controlled electrodes are packaged with an air tight seal to maintain product in an original “FACTORY FRESH” condition for an indefinite period provided the seal is unbroken.

Ferrocraft 16 Twincoat

- Unique dual or twin coated flux for easy arc starting
- Ultra smooth performance in all welding positions
- Reliable Grade 3 weld metal properties
- Ideal electrode for a wide range of maintenance jobs, including the repair of earthmoving equipment and as a buffer layer prior to the application of hardfacing.

Classifications:
AS/NZS 4855: (new) B E4916 A U H10

Ferrocraft 7016

- Fully Basic Hydrogen Controlled E4816 / E7016 Type Electrode.
- Excellent Operator Appeal in All Positions.
- Ideal for Fill and capping passes.
- Excellent Impact Toughness to -30°C.
- Applications include pressure vessel fabrication, bridge, ship building, equipment repair and maintenance work.

Classifications:
AS/NZS 4855: (new) B 4916 A U H10
AS/NZS 1553.1: (old) E4816-3 H10
AWS/ASME-SFA A5.1: E7016 H8

Typical All Weld Metal Mechanical Properties:
- Yield Stress: 480 MPa
- Tensile Strength: 570 MPa
- Elongation: 25%
- CVN Impact Values: 125J av @ -20°C
- 100J av @ -30°C

4.0 380 19 120 – 180 5kg 15kg - 3 x 5kg 611744

Ferrocraft 7016 is formulated to operate with AC (minimum 50 OCV) DC+ or DC- polarity.
The preferred polarity of fillet welding and fill and capping passes is DC+.
Hydrogen Controlled Electrodes

**Ferrocraft 55U**

- Basic, Hydrogen Controlled E4816 / E7016 Type Electrode.
- Thin Coated for Easier Joint Access.
- Purple End Tip Colour for instant I.D.
- Designed specifically for the all positional (except vertical down) root pass welding of steel pipes and plates.

**Classifications:**

| AS/NZS 4855: (new) | E4816-2 H10 |
| AS/NZS 1553.1: (old) | E4816-2 H10 |
| AWS/ASME-SFA A5.1: | E7016 H8 |

**Typical All Weld Metal Mechanical Properties:**

- **Yield Stress:** 480 MPa
- **Tensile Strength:** 570 MPa
- **Elongation:** 29%
- **CVN Impact Values:** 70J av @ -20°C

Ferrocraft 55U is formulated to operate on low welding current to accommodate poor joint fit up and large root gaps. The electrode is suitable for AC (minimum 70 OCV) DC+ or DC- polarity. The preferred polarity for root pass welding is DC-. To maximise weld metal toughness fill and capping passes should be deposited with DC+ polarity.

**Ferrocraft 61**

- Basic Coated, Hydrogen Controlled E4816 / E7018 Type Electrode.
- Excellent Out-of-Position Welding.
- Reliable Impact Properties to -30°C.
- BATCH NUMBER Identification.
- Designed for all positional (especially vertical-up) fillet and butt welding applications on heavier steel sections under high restraint such as machinery parts, pressure vessels, mining equipment, pipework, ship construction and all maintenance & repair work.

**Classifications:**

| AS/NZS 4855: (new) | E4816-A U H10 |

Stainless Steel & Special Electrodes

**Bronzecraft AC-DC**
- Phosphor Bronze electrode containing 7% Tin.
- For Welding Copper and Copper Alloys.
- Also for Joining Copper and Copper Alloys to Steel.
- Easy to use, High Quality Weld Deposit Appearance.

**Satincrome 308L-17**
- Hermetically Sealed Ultra-Seal vacuum packs.
- Rutile Type, Stainless Steel Electrode.
- Outstanding Operator Appeal. Improved slag lift.
- All Positional (except vertical down) Welding Capabilities.
- Applications include the single and multi-pass welding of 19Cr/10Ni type stainless steel grades including 201, 202, 301, 303, 304, 304L, 305, 308 etc.

**Satincrome 309Mo-17**
- Hermetically Sealed Ultra-Seal vacuum packs.
- Rutile Type, Stainless Steel Electrode.
- Outstanding Operator Appeal. Improved slag lift.
- All Positional (except vertical down) Welding Capabilities.
- Applications include the single and multi-pass welding of 309 and 309L stainless steels. Also suitable for the dissimilar welding of other “300 series” austenitic stainless steels and selected “400 series” ferritic grades to mild or low alloy steels.

**Typical All Weld Metal Mechanical Properties:**

Stainless Steel & Special Electrodes

Weldall

- Hermetically Sealed Ultra-Seal vacuum packs.
- Easy-to-Use Rutile Type, High Alloy Electrode.
- Outstanding Operator Appeal!
- WELDS ALL Steels!
- Ideal for Repair & Maintenance jobs.
- Easy Arc Starting and Excellent Stability on Low O.C.V. Welding Machines.
- Not Recommended for Welding Cast Irons.

Typical All Weld Metal Mechanical Properties:
- 0.2% Proof Stress: 630 MPa
- Tensile Strength: 700 MPa
- Elongation: 25%
- CVN Impact Values: 30 J at +20°C

Typical All Weld Metal Analysis:
- C: 0.11%
- Mn: 0.60%
- Si: 0.88%
- Cr: 27.0%
- Ni: 9.10%
- S: 0.011%
- P: 0.020%

Comparable CIGWELD Products:

Castcraft 55

- Maintenance Welding of S.G. Cast Irons.
- Higher Strength Nickel / Iron Deposit.
- Easy starting and Stable Running on Portable 240V Welding Machines.
- Applications include the higher strength repair and maintenance welding of Spheroidal Graphite (S.G.) iron,
austenitic cast iron, mehanites and a wide range of grey cast irons.

Typical All Weld Metal Mechanical Properties:
- Tensile Strength: 500 MPa
- Hardness: 220 HV50

Typical All Weld Metal Analysis:
- C: 0.95%
- Mn: 0.65%
- Si: 0.25%
- Al: 0.25%
- Ni: 53%
- Fe: Bal

Core Wire:
- Nickel Iron (55% Ni, 45% Fe)

Comparable CIGWELD Products:

Cobalarc Hardfacing Electrodes

**Cobalarc 1e**

- Highly Aligned Extruded Electrode.
- High Chromium Carbide Iron Deposit.
- Ideal for Coarse Abrasion and Low to Moderate Impact Loading.
- For wear resistant overlays on austenitic manganese steels.

**Typical All Weld Deposit Analysis:**
- C: 5.00%
- Mn: 1.10%
- Si: 1.3%
- Cr: 35.0%

**Typical Weld Deposit Hardness:**
- Single layer on mild steel: 58 - 660 HRC
- All weld metal deposit: 61 - 730 HV

**Deposits contain complex Chromium Carbides with hardness up to 1,500 HV.**

**Finishing Recommendations:**
- Grinding only

**Comparable CIGWELD products:**

---

**Cobalarc 9e**

- Highly Aligned Extruded Electrode.
- Versatile, Complex Carbide Iron Deposit.
- Resistant to both Coarse and Fine Abrasion and Moderate to Heavy Impact Loading.
- Typical applications include the hard surfacing of railway ballast tampers, dredge buckets and lips, earth moving equipment, power shovels, rolling mill guides, sizing screens, ripper teeth and crushing equipment.

**Typical All Weld Deposit Analysis:**
- C: 4.8%
- Mn: 1.1%
- Si: 1.4%
- Cr: 30.0%
- Ni: 0.5%
- Mo: 1.7%
- V: 0.2%

**Typical Weld Deposit Hardness:**
- Single layer on mild steel: 58 - 660 HRC
- All weld metal deposit: 63 - 780 HV

**Deposits contain complex Chromium Carbides with hardness up to 1,500 HV.**

**Finishing Recommendations:**
- Grinding only

**COMWELD LW1-6**

- Copper Coated, Low Carbon Steel Rod for Gas TIG & Oxy Welding Applications.
- End stamped with “ER70S-6” for easy I.D.
- Recommended for the TIG welding of steel pipes, plates and castings with a tensile strength in the 500 MPa class.

### Typical Weld Deposit Properties:
- **Yield Stress** 400 MPa
- **Tensile Strength** 500 MPa
- **Elongation** 29%
- **CVN Impact Values** 100 J av@-20˚C

### Typical Rod Analysis:
- **C**: 0.08%
- **Mn**: 1.16%
- **Si**: 0.75%
- **S**: 0.010%
- **P**: 0.015%
- **Fe**: Balance

### Joining process:
Gas (fusion) and Gas Tungsten Arc (TIG) welding

**COMWELD Super Steel**

- Low Carbon Steel Filler Rod for Gas Tungsten Arc (TIG) Welding.
- Triple Deoxidised for Superior Weld Deposit Quality and Resistance to Porosity.
- End Stamped with AWS Class ER70S-2.
- Ideal for TIG welding rusty or mill scaled plates and pipes and the root pass welding of pipes, tanks and heavy walled joints.

### Typical Weld Deposit Properties:
- **Yield Stress** 425 MPa
- **Tensile Strength** 520 MPa
- **Elongation** 34%
- **CVN Impact Values** 150 J av@-29˚C

### Typical Rod Analysis:
- **C**: 0.06%

**COMWELD CrMo1**

- Nominal 1.1/4Cr 1/2Mo steel TIG rod.
- End Stamped with AWS Class ER80S-B2 for Easy Identification.
- For the Gas Tungsten Arc (TIG) Welding of matching Cr - Mo Creep Resistant Steels for Elevated Temperature and Corrosive Service.

### Typical Weld Metal Mechanical Properties:
- **Welding Grade Argon:**
  - **0.2% Proof Stress** 500 MPa
  - **Tensile Strength** 600 MPa
  - **Elongation (in 2 inches)** 20%
  - **CVN Impact Values** 60 J av@-20˚C
  - Post weld heat treated at 620˚C as required by AWS A5.28

### Typical Rod Analysis:
- **C**: 0.09%
- **Mn**: 0.60%
- **Si**: 0.60%
- **Cr**: 1.30%
- **Mo**: 0.50%

## COMWELD CrMo2

- Nominal 2 1/2CR1Mo steel TIG rod.
- End Stamped with AWS Class ‘ER90S-B3’ for Easy Identification.
- For the Gas Tungsten Arc (TIG) Welding of Cr-Mo and Cr-Mo-V Creep Resistant Steels for Elevated Temperature and Corrosive Service.

### Typical All Weld Metal Mechanical Properties:

- **Welding Grade Argon:** 0.2% Proof Stress 560 MPa
- **Tensile Strength:** 670 MPa
- **Elongation (in 2 inches):** 18%
- **CVN Impact Values:** 60J av @+20˚C
- **Post weld heat treated at 690˚C as required by AWS A5.28**

### Typical Rod Analysis:

## COMWELD 308L

- Resealable 5kg Plastic Tube.
- Suitable for Gas and GTA (TIG) Welding.
- End Stamped with AS / AWS Class ‘308L’.
- DARK BLUE COLOUR CODED Label for Instant I.D.

### Typical All Weld Metal Mechanical Properties:

- **0.2% Proof Stress:** 450 MPa
- **Tensile Strength:** 690 MPa
- **Approx. melting point:** 1400˚C
- **Weld metal density:** 7.95 gms/cm³
- **Weld metal microstructure:** Austenite with 5-8% ferrite

### Typical Rod Analysis:

- **C:** 0.015%
- **Mn:** 1.90%
- **Si:** 0.50%
- **Cr:** 19.90%

## COMWELD 309L

- Resealable 5kg Plastic Tube.
- Suitable for Gas and GTA (TIG) Welding of highly alloyed 309 or 309L type stainless steel.
- End Stamped with AS / AWS Class ‘309L’.
- RED COLOUR CODED Pack Label for Instant I.D.
- Also suitable for the dissimilar joining of other 300 series austenitic stainless steels to ferritic steels.

### Typical All Weld Metal Mechanical Properties:

- **0.2% Proof Stress:** 440 MPa
- **Tensile Strength:** 590 MPa
- **Approx. melting point:** 1400˚C
- **Weld metal density:** 7.95 gms/cm³
- **Weld metal microstructure:** Austenite with 15-20% ferrite

### Typical Rod Analysis:

- **C:** 0.015%
- **Mn:** 1.90%
- **Si:** 0.45%
- **Cr:** 23.5%

COMWELD AL4047

- Aluminium - 10% Silicon Alloy Rod.
- Suitable for Gas Welding and Gas Tungsten Arc (GTAW / TIG) Welding Applications.
- Embossed with AS / AWS Class ‘4047’.
- Used extensively for the brazing of many types of Aluminium alloy sheets, extruded shapes and castings

Weld Deposit Properties:
- Tensile strength: 150 MPa
- Approx. melting point: 577-582°C
- Post anodised colour tint: Grey-Black

Rod Analysis Limits:
- Single values are maximum allowable, unless otherwise stated
- Si: 11.0-13.0% Fe: 0.80% Cu: 0.30%
- Mn: 0.15% Mg: 0.10% Zn: 0.20%
- Total others each: 0.15% Al: Balance

Classifications:
- AS/NZS 1167.2: R4047
- AWS/ASME-SFA A5.10: R4047
- AWS/ASME-SFA A5.8: BAISi-4

COMWELD AL5356

- Aluminium - 5% Magnesium Alloy Rod.
- Suitable for Gas Welding and Gas Tungsten Arc (GTAW/TIG) Welding Applications.
- Embossed with ‘AS/AWS Class 5356’.
- Produces intermediate deposit strength and good ductility and corrosion resistance for the welding of a wide range of 5XXX, 6XXX and 5XX Aluminium alloys.

Classifications:

AS/NZS 1167.2: RS356
AWS/ASME-SFA A5.10: RS356

Weld Deposit Properties:

- Tensile strength: 270 MPa
- Approx. melting point: 640°C
- Post-anodised colour tint: White

Rod Analysis Limits:

Single values are maximum allowable, unless otherwise stated.

COMWELD General Purpose, Cast Iron Rod

- A High Strength, General Purpose, Cast Iron Alloy for Joining and Building up Grey Cast Iron Castings.
- Machinable Weld Deposit.

Classifications:

AS/NZS 1167.2: RC11

Weld Deposit Properties:

- Tensile strength: 230 MPa
- Approx. melting point: 1150°C

Typical Rod Analysis:

- C: 3.37%
- Mn: 0.75%
- Si: 3.25%
- S: 0.008%
- P: 0.011%
- Fe: Balance

Joining Process:

COMWELD Silicon Bronze Rod

- Premium Quality Deoxidised Silicon - Bronze alloy.
- Recommended for the Braze Welding and GTA (TIG) welding of Copper Silicon alloys (Everdur and Cusilman).
- CANARY YELLOW End Tip Colour.
- Produces excellent joints on copper, brass and copper-zinc sheet, tube and extruded section.

Classifications:

AS/NZS 1167.1: AS/NZS 1167.2: R Cu Si-A
AWS/ASME-SFA A5.7: R Cu Si-A (UNS No. C65600)

Weld Deposit Properties:

- Tensile strength: 370 MPa
- Approx. melting point: 970-1020°C
- Weld metal density: 8.85 gms/cm³
- Hardness: 90 HV (90HB)

Typical Rod Analysis:

- Fe: 0.25%
- Mn: 1.00%
- Pb: 0.02%

COMWELD 40/60 Soft Solder

- General Purpose Low Cost Solder.
- General For Sheet Metal & Plumbing Applications.
- General Wide Range of Packaging Options.

Description & application:
COMWELD 40/60 Solder is a low cost general purpose solder for general sheet metal work, plumbing (not water pipes) such as gutters and flashings and automotive radiator repairs.

Classifications:
AS 1834 Part 1: 40Sn

Colour Code & Identification:
Cored wire reels Green label
Sticks Handipack (H/P) Coil Yellow backing card & label

Joining Process:
Soldering only
Soldering iron bit temperature: 294°C

Typical Rod Analysis:
Sn: 40% (Tin) Pb: 60% (Lead)

Properties:
- Tensile strength: 42 MPa
- Shear strength: 37 MPa
- Approx. melting range: 183-234°C
- Electrical conductivity: 10.1% IACS

Typical Properties:
- Tensile strength: 45 MPa
- Shear strength: 40 MPa
- Approx. melting range: 183-212°C
- Electrical conductivity: 10.9% IACS

Description & application:
COMWELD 50/50 Solder is a higher quality general purpose solder for general sheet metal work, and plumbing (not water pipe) applications where better free flowing characteristics are important.

Classifications:
AS 1834 Part 1: 50Sn

Colour Code & Identification:
Cored wire reels Orange label
Sticks Handipack (H/P) Coil marked 50/50

Joining Process:
Soldering only
Soldering iron bit temperature: 272°C

Typical Rod Analysis:
Sn: 50% (Tin) Pb: 50% (Lead)

Properties:
- Tensile strength: 45 MPa
- Shear strength: 40 MPa
- Approx. melting range: 183-212°C
- Electrical conductivity: 10.9% IACS

Typical Properties:
- Tensile strength: 42 MPa
- Shear strength: 37 MPa
- Approx. melting range: 183-234°C
- Electrical conductivity: 10.1% IACS

Description & application:
COMWELD 965 Solder is a tin / silver eutectic solder which has the highest strength of all soft solders. Due to it’s high strength, good electrical and thermal conductivity, non toxicity (lead, zinc and cadmium free) and also the fact that it remains bright and shiny, make COMWELD 965 Solder the most universal of soft solders. COMWELD 965 Solder is used for the joining and repair of copper, bronze, brass, nickel, monel, steel, stainless steel, pewter, chrome plate, metal sculpture, model making, costume jewellery and or a combination of metals with the exception of aluminium and magnesium.

Classifications:
AS 1834 Part 1: 96.5Sn/3.5Ag

Colour Code & Identification:
Blue labels & backing cards

Joining Process:
Soldering only
Soldering iron bit temperature: 281°C

Typical Rod Analysis:
Sn: 96.5% (Tin) Ag: 3.5% (Silver)

Properties:
- Tensile strength: 60 MPa
- Density: 7.59g/cm³
- Approx. melting point: 220°C
- Electrical conductivity: 17% IACS

Typical Properties:
- Tensile strength: 42 MPa
- Shear strength: 37 MPa
- Approx. melting range: 183-234°C
- Electrical conductivity: 10.1% IACS

For procedure recommendations refer to Pocket Guide.
Solders and Fluxes

COMWELD Metal Mate Solder Kit

- Highest Strength Soft Solder.
- Lead, Zinc and Cadmium Free.
- Non Toxic Solder For Electrical, Surgical and Food Equipment Applications.

Description & application:
COMWELD Metal Mate Solder Kit contains a 14 gram 96.5 solid solder coil complete with a 14 ml bottle of COMWELD 965 Soldering Flux which provides a very compact package suitable for all of the applications recommended for the standard Comweld 965 Soft Solder.

Classifications:
AS 1834 Part 1: 96.5Sn/3.5Ag

Colour Code & Identification:
Clear plastic jar, white lid & white label with blue print

Typical Rod Analysis:
Sn: 96.5% (Tin) Ag: 3.5% (Silver)

Typical Properties:
- Tensile strength: 60 MPa
- Density: 7.5g/cm³
- Approx. melting point: 220°C
- Electrical conductivity: 17% IACS

Joining Process:
Soldering only
Soldering iron bit temperature: 281°C

Typical Rod Analysis:
- Sn: 96.5% (Tin)
- Ag: 3.5% (Silver)

Typical Properties:
- Tensile strength: 60 MPa
- Density: 7.5g/cm³
- Approx. melting point: 220°C
- Electrical conductivity: 17% IACS

COMWELD Aluminium Flux

- For Fusion Welding Aluminium Alloys.
- Highest Quality Flux.
- Useable in either Powder or Paste Form.

Description & application:
COMWELD Aluminium Flux is an all purpose flux for fusion welding sheet and cast aluminium. It eliminates the need for a number of different types of aluminium welding fluxes being stocked to handle different types of aluminium welding alloys. COMWELD Aluminium Flux is recommended for use with the following COMWELD Aluminium welding rods, AL1188 (Pure), AL4043 (5% Silicon) and AL5356 (5% Magnesium).

Colour Code & Identification:
White powder in black plastic jars

Melting Point:
545°C

Packaging Data:

COMWELD Copper & Brass Flux

- For Universal Braze Welding Applications.
- Highest Quality Flux.
- Useable in either Powder or Paste Form.

Description & application:
COMWELD Copper and Brass Flux is specially developed for the braze welding of copper, brass and bronze and the brazing of copper, steel, etc. COMWELD Copper and Brass Flux is particularly suitable for use with COMWELD Manganese Bronze, Tobin Bronze, Nickel Bronze and Silicon Bronze rods.

Colour Code & Identification:
Pink powder in black plastic jars or drums

Melting Point:
645°C

Packaging Data:

COMWELD Silver Brazing Flux No.2

- For Silver Brazing of Carbon Steel, Stainless Steels & Dissimilar Metals.
- Highest Quality Flux.
- Used in a Paste Form.

**Colour Code & Identification:**
White paste in either a black or white plastic jar

**Melting Point:**
450˚C

**Description & application:**
COMWELD Silver Brazing Flux No.2 and Silver Brazing Alloys with a high silver content (42-50%) produce excellent joints on carbon steel, stainless steel, nickel alloys and copper and brass.

Dissimilar metals in the above groups can be easily brazed.
The flux is a good temperature indicator and will melt at the proper brazing temperature.

**Packaging Data:**

COMWELD G.P. Silver Brazing Flux

- For Silver Brazing of Carbon Steel, Stainless Steels & Dissimilar Metals.
- Highest Quality Flux.
- Used in a Paste Form.

**Colour Code & Identification:**
White paste in either a black or white plastic jar

**Melting Point:**
485˚C

**Description & application:**
COMWELD General Purpose Silver Brazing Flux is recommended for use with Cadmium bearing and Cadmium free silver brazing alloys with a low to medium silver content (2-40%). It is an excellent flux for medium to high temperature brazing and has been specially formulated to be used for induction brazing.

COMWELD General Purpose Silver Brazing Flux and the above mentioned silver brazing alloys produce excellent joints on carbon steel, stainless steel, nickel alloys and copper and brass.

Solders and Fluxes

COMWELD Vapaflux

- For Braze Welding of Steel.
- Used with Comweld Manganese & Nickel Bronze Rods.
- Highest Quality Flux.
- Used in a Liquid Form Only.

**Description & application:**

COMWELD Vapaflux provides an effective and time saving method of applying flux when braze welding steel. It is intended to be applied as vapour in the flame itself (the flux in the flame) and will impart a high fluidity to the bronze when deposited.

**Colour Code & Identification:**
Clear liquid in a tin plate can

**Flash Point (True Closed Cup):**
17˚C

**Packaging Data:**
